CENG3507 : Web Programming Homework

Flight Booking Website – HTML & CSS

Objective

In this assignment, you will design and develop the **frontend interface of a flight booking website** using only HTML and CSS.

Important: You should not copy the website exactly. You are expected to create your own design inspired by the general concept.

Technologies

You are allowed to use only:

- HTML5
- CSS3

You **must not use**:

- JavaScript
- Bootstrap
- Tailwind CSS
- React
- PHP
- Python
- Django
- Any other framework or backend technology

No database or backend functionality is required.

---

1. Header and Navigation

Create a navigation bar at the top of your website.

The navigation menu should contain at least:

- Flight Tickets
- Hotels
- Bus Tickets

- Car Rental
- Transfers
- Campaigns
- Help

On the right side, include:

- **Log In**
- **Sign Up**

buttons.

The navigation bar should have a professional and consistent design.

---

2. Flight Search Section

The main section of the homepage should contain a **flight search form**.

Flight Type

Use radio buttons for:

- One Way
- Round Trip
- Multi-City

Also include a checkbox:

- Non-stop flights only

Flight Information

Create the following form fields:

From

Example:

> Istanbul (IST)

To

Example:

> Antalya (AYT)

Departure Date

Use an HTML `date` input.

Return Date

Use an HTML `date` input.

Passengers

Example:

> 1 Passenger

Cabin Class

Example:

> Economy

At the bottom of the form, add a prominent:

SEARCH FLIGHTS

button.

> The search button does not need to perform an actual search. JavaScript is not allowed in this assignment.

---

3. Popular Flights

Create a section called:

Popular Flights

Display at least **6 flight cards**.

Each card should contain:

- Departure city
- Destination city
- Flight duration
- Price
- A button such as "View Flight"

Example:

From	To	Duration	Price
Istanbul	Antalya	1h 20m	€45
Istanbul	Izmir	1h 10m	€40
Ankara	Istanbul	1h 05m	€38
Izmir	Antalya	1h 15m	€42
Istanbul	Trabzon	1h 45m	€50
Antalya	Ankara	1h 10m	€39

Use CSS to create visually appealing cards.

---

4. Campaigns

Create a section called:

Special Offers & Campaigns

Create at least **3 campaign cards**.

For example:

First Flight Discount

Get a special discount on your first flight.

Explore Offer

International Flight Deals

Discover special prices for selected international destinations.

Explore Offer

Student Offers

Special flight deals for students.

Explore Offer

Each campaign should have an image or visual element, a title, a short description, and a button.

---

5. Why Choose Us?

Create a section explaining why customers should use your flight booking platform.

Include at least **3 features**.

For example:

Affordable Prices

Compare hundreds of flights and find suitable prices.

Secure Booking

Enjoy a safe and reliable booking experience.

Fast and Easy

Find and compare flights quickly and easily.

You should use CSS to create cards, icons, or other visual elements for this section.

---

6. Footer

Create a footer at the bottom of the website.

The footer should contain at least **four columns**.

Flight Tickets

- Domestic Flights
- International Flights
- Popular Routes

Help

- Frequently Asked Questions
- Contact Us
- Cancellation & Refund

Company

- About Us
- Careers
- Contact

Follow Us

- Instagram
- X
- Facebook
- LinkedIn

At the bottom of the footer, include:

> © 2026 FlightSearch – All Rights Reserved.

---

7. CSS Requirements

Your CSS file must demonstrate the use of the following CSS properties and concepts:

- `display: flex`
- `display: grid`
- `margin`

- `padding`
- `border`
- `border-radius`
- `box-shadow`
- `background`
- `font-size`
- `font-weight`
- `hover`
- `transition`

You are expected to design:

- Navigation bar
- Buttons
- Input fields
- Flight cards
- Campaign cards
- Footer
- Search form

The website should have a **consistent visual style**.

---

8. Responsive Design

Your website must be responsive.

It should work properly on:

Desktop

1920 × 1080

Tablet

768 × 1024

Mobile

375 × 667

You must use CSS media queries.

For example:

```
@media (max-width: 768px) {
    /* responsive styles */
}
```

The layout should adapt to smaller screens.

For example:

- Navigation items may be rearranged.
- Flight cards may become a single-column layout.
- The search form may change from a horizontal layout to a vertical layout.

---

9. Semantic HTML

You should use **semantic HTML5 elements** wherever appropriate.

For example:

```
<header>
<nav>
<main>
<section>
<article>
<footer>
```

Avoid creating the entire website using only `<div>` elements.

---

10. Required File Structure

Your project should have the following structure:

```
flight-booking/
│
├── index.html
│
├── css/
│   └── style.css
│
└── images/
    ├── logo.png
    ├── campaign1.jpg
    ├── campaign2.jpg
    └── campaign3.jpg
```

---

11. Important Rules

1. Only **HTML5 and CSS3** are allowed.
2. JavaScript is **not allowed**.

3. CSS frameworks such as Bootstrap and Tailwind are **not allowed**.
4. JavaScript libraries and frontend frameworks are **not allowed**.
5. You must create your own design.
6. Do not directly copy any website.
7. The website must be responsive.
8. Semantic HTML elements should be used.
9. All buttons and forms are for **visual purposes only**. They do not need to perform real operations.
10. All CSS should be written in a separate `style.css` file.

Expected Result

At the end of the assignment, you should have created a **modern, responsive flight booking homepage** that includes a navigation bar, flight search form, flight cards, campaign section, informational section, and footer.

The website does **not** need to perform actual flight searches or bookings.

The main purpose of this assignment is to demonstrate your ability to use **HTML5 and CSS3 to create a structured, visually appealing, and responsive web interface.**
